

OBIC iOS & Android App

V1 Product Plan + UX Prototype Summary · English first · Ctrip-inspired UI

Website: www.obicgp.com · Branches: Yiwu, Guangzhou, Yemen, Foshan, Hangzhou, Hainan

Document date: 2026-08-05 · Deliverable package for stakeholders

Confidentiality: This document and the interactive prototype are for OBIC internal use. Do not publish the repo publicly. Keep API keys, customer data, and contract files out of git. Specs on Desktop/obic (deal, staff lists) stay outside the code repository.

1. Goal

Build one mobile app for iOS and Android so international clients can discover, request, track, and communicate about OBIC China corporate/travel services — look & density inspired by Ctrip () Chinese app, branded as OBIC. English UI first; Arabic/Chinese later via i18n files.

2. V1 Scope (ship first)

In V1	Out of V1 (later)
Home (search, colored tiles, banners, promos) All 16 services as entries Service detail + request form Auth: phone + email register/login, guest browse Orders list + status timeline Messages + chat with images & files Voice / video / incoming call UI Register / Login with Email or Phone tabs Discreet Staff entry → Staff Login Admin App (mobile) + Admin Web (desktop) Roles: Super Admin vs Employee privileges Me / About / branch / language placeholder 5 bottom tabs (customer)	Live WebRTC media servers (calls are UX-ready) Full ERP / task trees / KPI boards Live flight/hotel inventory APIs Wallet, agents, money transfer execution All payment gateways (Stripe/Visa in phase 3) Full multi-language UI

3. Bottom navigation (5 tabs)

Tab	Purpose
Home	Search, primary tiles, promos, recommended
Services	Full catalog grid
Messages	Support + system notifications
Orders	Requests and status
Me	Profile, login, About, settings

4. Services (from website / mini program)

Hotels · Flights · Visa · Bank Account · VIP · Legal · Company Registration · Scholarships · Money Transfer (request/info only in V1) · Advertisements · Business Services · HR · Insurance · International Expansion · Technical Support · Business Planning

5. Phased delivery

Phase	Deliverable
Month 1 — V1 customer app	UI + auth + services + orders + chat (files/images) + call UI · TestFlight / internal Android
Month 2	Admin web · Push · wire real chat media upload · call signaling stub
Month 3	Card payments (Stripe/Visa) · i18n start · live WebRTC if approved · store submission
Later	ERP workflows · inventory APIs · transfers

6. Suggested stack (fastest dual-platform)

Layer	Recommendation
Mobile	Flutter <i>or</i> React Native (Expo) — pick one team skill
API	NestJS <i>or</i> Laravel + PostgreSQL
Auth	JWT + SMS OTP + email
Admin	Next.js <i>or</i> Flutter web
Payments (later)	Stripe for international cards
Chat + media	WebSocket / Stream Chat · file & image upload
Calls (later wire)	WebRTC <i>or</i> Agora / Twilio — UX already in prototype

7. Design system

- **Brand navy:** #0B1F3A · **Primary blue:** #1A6DFF
- **Tile accents:** red hotels, blue flights, teal visa, green bank, orange VIP
- **Font:** Plus Jakarta Sans + DM Sans — premium, not Inter-only
- **Layout:** Ctrip-like colored priority tiles + secondary grid + promo cards + rankings
- **Motion:** banner slide, tile press, tab highlight, CTA shimmer, call pulse
- **i18n:** all strings in en.json from day one

8. UX prototype screens (V1)

Interactive HTML prototype path: `prototype/index.html` (open in Chrome). Screen map covered:

01 Home Brand, search, 5 primary tiles, secondary grid, VIP banner, promos, recommended list	02 Services Full 16-service catalog
03 Service Detail Hero, inclusions, price, Request / Chat CTAs	04 Request Order Branch, name, phone, email, notes → submit
05 Orders List with status badges	06 Order Timeline Step progress + message advisor
07 Messages Support + system threads	08 Chat + files Text, image bubbles, file chips, attach Photo/File, voice & video call buttons
09 Voice call Avatar, timer, mute / speaker / hang up	10 Video call Remote + local video placeholders, mute, flip, end
11 Incoming call Accept / decline / answer with voice	12 Me Guest header, wallet row, settings menu
13–14 Auth Login + Register with Email Phone tabs + OTP	15 Search Hot keywords + results
16 About Brand, branches, discreet Staff mark	17 Staff Login Hidden employee entry · role demo toggle
18–20 Admin App Mobile dashboard, orders, staff & privileges (Super Admin)	W1–W2 Admin Web Desktop admin panel + staff/role management

8b. Roles & privileges

Role	Can do	Cannot do
Super Admin	Full modules · promote / designate staff · grant privileges · system settings · “Signed by Super Admin”	—

Employee / Staff	Orders · chat · assigned customers	Promote others · full system settings · privilege matrix edits
-------------------------	------------------------------------	--

Staff entry is discreet (small “O · Staff” mark on Me / About) — not a customer CTA. Admin exists in **both** the mobile app (staff mode) and a desktop Admin Web layout in the same prototype (toggle).

9. Design concepts

Left: Home concept · Right: Me / profile concept (Ctrip-inspired OBIC brand)

10. Security & no data leak

- Private git only · never commit .env / keys / customer PII
- Keep Desktop deal/PRD/staff files out of the repo
- Dev / Staging / Prod environments separated
- Password hashing, OTP rate limits, HTTPS, admin audit log
- App Store privacy policy required before release

11. How to use deliverables

1. Open `prototype/index.html` in Chrome — click left nav or in-phone tabs
2. **Remote share:** publish static site via GitHub Pages (repo root) — stakeholder opens a URL on phone or desktop
3. Share this PDF with stakeholders for sign-off on V1 scope
4. After approval: scaffold Flutter or Expo app and implement screens matching the prototype

12. Fastest path to real iOS/Android code

1. Choose stack: **Flutter** (fast UI) or **Expo** (JS team)
2. Scaffold app + navigation with 5 tabs matching prototype
3. Hard-code services list first; plug API in week 2
4. Stand up Nest/Laravel + Postgres (users, services, orders, branches)
5. Wire auth OTP; then order submit; then chat stub
6. Internal TestFlight / APK — do not block on Figma (HTML is the UX source)
